PRITISH MANNA

B.TECH CSE (AI/ML) | DATA & AI ENTHUSIAST

Mobile: +91 8583868758 | Email: mpritish92@gmail.com | Location: Kolkata, India
Linkedin: linkedin.com/in/pritish-manna-a80274185 | GitHub: github.com/Pritish-manna

PROFESSIONAL SUMMARY

B.Tech Computer Science Engineering (AI/ML) student with a strong foundation in Python, data analysis, databases, SQL, and machine learning. Experienced in developing practical data-driven and AI projects involving supply chain analytics, banking risk analysis, and AI-based image assessment. Interested in solving real-world problems through practical AI, data, and software solutions.

EDUCATION

B.Tech in Computer Science Engineering (AI/ML) | Brainware University, Barasat,West Bengal, India

TECHNICAL SKILLS

Programming: Python, C, Java, HTML, CSS, Javascript
Data & AI: Pandas, NumPy, Matplotlib, Machine Learning, Data Analysis
Databases: DBMS, SQL
AI/ML Tools: Gemini Vision, LangChain, Pydantic
Development: Streamlit, FastAPI

EXPERIENCE

Data Analytics with AI Intern — IBM SkillsBuild × AICTE × BharatCares | *Aug 2026 – Present*

- Apply data analytics, AI, and machine learning techniques to real-world problem statements and data-driven projects.

Data Analytics Intern — Gameonix Esports & Gaming, Geekglory Technologies Pvt. Ltd. | *Jan 2026 – Apr 2026*

- Analyzed domain-specific data and applied data-driven problem-solving techniques to derive actionable insights for esports and gaming use cases.

PROJECTS

OnionGrade AI – AI-Based Onion Quality Assessment & Grading

Technologies: Python, Gemini Vision, Streamlit, FastAPI, LangChain, Pydantic

- Developed an AI-based prototype to assess and grade onion quality from uploaded images for Smart India Hackathon 2026 problem statement SIH26031.
- Used vision-based analysis to detect individual onions and identify visible quality characteristics and defects.
- Designed an auditable pipeline that separates AI-based visual observation from deterministic grading rules and calculations.
- Built an interactive Streamlit interface with quality metrics, defect analysis, reports, and CSV/PDF export.

Project Delta-Flow – Supply Chain / Logistics Analytics

Technologies: Python, Pandas, NumPy, Matplotlib, Scikit-learn

- Analyzed a 10,000+ record supply chain dataset to uncover demand patterns, inventory trends, and delivery performance.
- Performed data cleaning, exploratory data analysis, and feature engineering to prepare analytical features.
- Built forecasting and risk-scoring models to predict product demand and identify potential supply chain risks.
- Created visualizations and dashboards to communicate data-driven insights for inventory and logistics analysis.

Banking & Loan Risk Analysis

Technologies: Python, Pandas, NumPy, Matplotlib, SQL, Scikit-learn

- Analyzed 10,000+ banking customer records to assess loan default risk and customer financial behavior.
- Performed data cleaning, feature engineering, and risk segmentation using income, credit history, loan amount, and repayment behavior.
- Built a risk analysis model to estimate loan default probability and identify high-risk applicants.
- Developed dashboards and visualizations to support data-driven lending analysis.

CERTIFICATIONS

- **NPTEL – The Joy of Computing using Python:** Elite + Gold | Score: 91%
- **NPTEL – Programming in Java:** Score: 97%

CORE STRENGTHS

Problem Solving • Quick Learning • Teamwork • Logical Thinking • Goal Oriented
